PERFLUOROELASTOMER (FFKM)

AKRON®

AKRON PF8290 PRECOMPOUND

Product Description

AKRON PF8290 is a chemically resistant perfluoroelastomer (FFKM) designed for applications requiring exceptional sealing capabilities against a wide range of corrosive media. It also offers excellent compression set resistance. Uses peroxide curing system for enhanced performance.

Key Features

- Outstanding Heat Resistance: Suitable for continuous use within a temperature range of -10°C to 290°C (14°F to 554°F).
- Excellent Chemical Resistance: Provides superior resistance to oils and corrosive solvents.
- Low Compression Set: Ensures long-term sealing performance under challenging conditions.

PF8290 Product Performance

Pre-cured Properties

Property	Unit	PF8290	Test Method
Mooney Viscosity (ML(1+10'), 121°C)	MU	46-75	ISO 289-1:2014
			ASTM D1646-04
Appearance	-	Translucent	Visual Inspection
Density	g/cm³	2.04	ISO 2781:2008
			ASTM D297-93
Fluorine Content	%	72.7	Oxygen Flask Combustion

Cured Properties

Property	Unit	PF8290	Test Method
Cure Curve (160°C × 30 min)			
MH (Maximum Torque)	dN∙m	16.5	
ML (Minimum Torque)	dN∙m	1.7	ISO 6502:1991
Ts2 (Scorch Time)	min:s	0:53	ASTM D5289-95
T90 (Cure Time)	min:s	6:48	

Mechanical Properties

Property	Unit	PF8290	Test Method
Hardness (Shore A)	-	66	ISO 6502:1991
			ASTM D5289-95
Tensile Strength	MPa	16.3	ISO 37:2005
Elongation at Break	%	173	ASTM D412-06a
Compression Set (290°C × 70 hr, 25%)	%	46	ISO 815-1:2008
			ASTM D395-03

Notes:

1. The above test data are typical values provided for reference only and are not intended as product specifications.

2. Cured Rubber Test Formula:

• **PF8290**: 100 phr

Luperox 101XL-45: 1.5 phr
 N-990 Carbon Black: 15phr

Recommended Curing Conditions

Press Cure: 170°C for 15 minutes
 Post-Cure: 290°C for 24 hours

Applications

PF8290 can be widely used across various industries, including:

- Chemical Processing: Ideal for components exposed to aggressive chemicals.
- Semiconductor Manufacturing: Suitable for critical sealing applications.
- Petrochemical and Oil & Gas Industries: Designed for harsh environmental conditions.

PF8290 is specifically engineered for manufacturing components resistant to various corrosive media, such as:

- Hot organic and inorganic acids
- Caustic alkalis
- Ketones, aldehydes, esters, ethers, and alcohols
- Fuels, solvents, acidic gases, hydrocarbons, steam, and hot water

Commonly manufactured items include:

• Sealing Elements: O-rings, gaskets, valve bodies, diaphragms, and more

Packaging

Packed in plastic film, 1 kg per package, or customized according to customer requirements.

Transportation

- Transported as non-hazardous solid material.
- Ensure packaging integrity during transportation.

Storage

- Store at room temperature in a dry, ventilated, and shaded environment.
- Valid for one year under proper storage conditions.
- Keep in a neutral environment, avoiding contact with acidic or alkaline substances.

Safety Guidelines

- Follow standard precautions to avoid skin and eye contact or inhalation of fumes.
- Refer to the Material Safety Data Sheet (MSDS) for detailed safety instructions or contact our company for more information.
